

MOHAMED MOHAMED SALAH

Software Engineer | Mobile Full Stack Developer

Giza, Egypt | m0hamed724@outlook.com | +201552257207 | [LinkedIn](#) | [GitHub](#)

SUMMARY

Innovative Full Stack Developer with 1+ year of experience specializing in cross-platform mobile and scalable web applications. Developed and deployed iOS and Android applications, enhancing functionality and reliability through state-of-the-art practices, such as integrating diverse APIs and configuring CI/CD pipelines.

EDUCATION

Bachelor of Science in Computer Science, Misr University for Science & Technology

2020 – 2024 | Giza, Egypt

- **Graduation Grade:** Very Good
- **Graduation Project Award:** 2nd Place Overall in ITI (Information Technology Institute) Supervised Evaluation across all CS and Engineering graduation projects.

EXPERIENCE

Full Stack Mobile Developer, Lev AI (formerly Diven-AI) — Part-time

07/2026 – Present

- Developed cross-platform mobile applications with Flutter and Dart, and expanded into React Native, Node.js, and PostgreSQL projects.
- Built RESTful APIs, worked with SQL and PostgreSQL, integrated Firebase, and applied Clean Architecture, Provider, Repository Pattern, and SOLID principles while supporting interns and junior developers.

Military Service

07/2025 – 09/2026

- Completed military service.

Full-Stack Mobile Developer, Diven-AI

07/2024 – 07/2025

- Built full-stack mobile products with Flutter, developed .NET backend APIs, and integrated databases for reliable end-to-end application experiences.
- Architected and deployed cross-platform iOS & Android healthcare applications using Flutter, Dart, and BLoC/Riverpod, cutting multi-platform development time by 40% while maintaining a 99.8% crash-free session rate and consistent 60 FPS UI performance.
- Engineered high-performance backend services using ASP.NET Core (C#) and designed a normalized SQL Server database with 15+ related tables (Patients, Appointments, EHR), optimizing EF Core queries to reduce average API response latency by 35%.
- Implemented enterprise-grade security via OAuth 2.0, JWT, and fine-grained Role-Based Access Control (RBAC) across 3 user tiers (Patients, Doctors, Admins), securing 100% of sensitive medical records and clinical endpoints against unauthorized access.
- Integrated third-party APIs and SDKs (Stripe, Google Maps, Firebase Cloud Messaging), automating 100% of online billing and booking lifecycles while validating 40+ API endpoints via Postman with zero critical integration errors.
- Streamlined QA and deployment workflows by setting up automated CI/CD pipelines and writing unit/mock tests using Flutter Test and Mockito, boosting test coverage to 80%+ and cutting pre-release regression testing time by 50%.

PROJECTS

Clinic Management System (CMS) — Flutter, .NET, SQL Server

04/2025 – 06/2025

- Designed the complete relational database from scratch, implementing 15+ SQL tables with PK/FK relationships across patients, doctors, appointments, diagnoses, medications, and medical records.
- Developed Flutter frontend and .NET backend, implementing role-based workflows across 3 user roles (Patients, Doctors, Admins), securing 100% of sensitive medical records against unauthorized access.
- Built and integrated 10+ RESTful API endpoints for authentication, doctor management, appointment booking, and records, validated via Postman with zero critical bugs.

Alarmus (Real-time Collaborative Alarms) — Flutter, .NET, FCM

01/2025 – 02/2025

- Built real-time notification-based collaborative alarm app supporting group creation and synchronized member wake-up alerts, cutting manual coordination time.
- Enabled group owners/moderators to trigger simultaneous notifications across all group members (tested with groups of 10+ concurrent users).
- Integrated Flutter frontend with .NET backend via 10+ Swagger-documented REST endpoints.

Manetho (Hieroglyphic Translation App) — Flutter, AI / CV / NLP

04/2024 – 06/2024

- Developed Flutter application integrating 2 AI models (hieroglyphic detection + NLP translation), achieving 80% recognition accuracy on test symbol sets.
- Delivered translation results via API integration with average response time under 10 seconds, tested with 20+ researchers and students.

Yalla 5roga (Social Outing Planner) — Flutter, Node.js, PostgreSQL

In Development

- Cross-platform outing planner replacing disorganized group chats with structured venue suggestion, voting, RSVP tracking, and Google Maps routing.

SKILLS & COMPETENCIES

- **Programming Languages:** Dart, JavaScript, TypeScript, Java, C#, C++, SQL
- **Mobile & Frontend:** Flutter, Provider, Riverpod, BLoC, React Native, Responsive UI Design
- **Backend & APIs:** ASP.NET Core, RESTful APIs, GraphQL, Microservices, Node.js, Clean Architecture
- **Databases:** SQL Server, PostgreSQL, SQLite, Firebase, Entity Framework Core
- **DevOps & Cloud:** Azure, AWS, Docker, CI/CD Pipelines, Git, GitHub Actions, Flutter Test & Mockito
- **Security:** JWT, OAuth 2.0, Identity Server, Role-Based Access Control (RBAC)

LANGUAGES

- **English:** Upper-Intermediate | • **Arabic:** Native
